THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

DETAILED ACTION

1. This office action is responsive to communication filed on June 18, 2008. Claims 1-18 are pending in the application.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 18, 2008 has been entered.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on June 18, 2008 was filed after the mailing date of the notice of allowance on March 14, 2008, and after a petition filed June 18, 2008 was granted withdrawing said allowance. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement has been considered by the examiner.

Allowable Subject Matter

4. Claims 1-18 are allowed.
5. The following is an examiner's statement of reasons for allowance:
Consider claim 1, the closest prior art of record (JP 06-153087) teaches:

A pixel compensating circuit (figure 4) for compensating defect pixels included in a video signal (see paragraphs 0006-0008) comprising:

a color information holding unit (frame memory, 45) for holding plural kinds of color information of a defect pixel and pixels adjacent said defect pixel (See paragraphs 0015 and 0016. Frame memory (45) holds three frames of pixel data (R, G and B) including defecting and non-defective pixels.), said color information of said defect pixel including defective color information and non-defective color information (See paragraphs 0019 and 0020. The frame memory holds defective color information (Px) and corresponding non-defective pixel information (Qx) for specific pixel locations, with Px and Qx corresponding to different color spaces.);

a difference calculating unit for calculating differences between non-defective color information (Qx) of said defect pixel and corresponding color information of said pixels (Q1-Q8) adjacent said defect pixel (See paragraphs 0019 and 0020. Absolute values of differences between non-defective pixel (Qx) and surrounding pixels (Q1-Q8) are calculated.);

a reference pixel determining unit for determining a reference pixel (Y) having color information that is the most similar to said non-defective color information (The pixel having the lowest absolute value difference from the non-defective pixel is calculated and written into a Y address buffer.).

The closest prior art then teaches replacing the defect pixel (Px) with the value of an adjacent pixel of the same color space (P) according to the pixel location (Y) determined as the reference pixel location above (paragraph 0021).

However, the prior art of record does not teach nor reasonably suggest a compensating unit for calculating an average value of said differences between said reference pixel and said defect pixel, and setting defective color information of said defect pixel to the value of the corresponding color information of said reference pixel minus said average value as required by claim 1.

Claims 2-6 are allowed as being dependent upon and allowed claim 1.

Consider claim 7, the closest prior art of record (JP 06-153087) teaches:

A pixel compensating method for compensating a defect pixel of a video signal (paragraphs 0015-0021), comprising the steps of:

holding plural kinds of color information of defect pixel and pixels adjacent said defect pixel (See paragraphs 0015 and 0016. Frame memory (45) holds three frames of pixel data (R, G and B) including defecting and non-defective pixels.), said color information of said defect pixel including defective color information and non-defective color information (See paragraphs 0019 and 0020. The frame memory holds defective color information (Px) and corresponding non-defective pixel information (Qx) for specific pixel locations, with Px and Qx corresponding to different color spaces.);

calculating differences between non-defective color information among said color information of said defect pixel and corresponding color information of said pixels adjacent said defect pixel (See paragraphs 0019 and 0020. Absolute values of

Art Unit: 2622

differences between non-defective pixel (Qx) and surrounding pixels (Q1-Q8) are calculated.);

determining a reference pixel (Y) having color information that is the most similar to said non-defective color information (The pixel having the lowest absolute value difference from the non-defective pixel is calculated and written into a Y address buffer.);

The closest prior art then teaches replacing the defect pixel (Px) with the value of an adjacent pixel of the same color space (P) according to the pixel location (Y) determined as the reference pixel location above (paragraph 0021).

However, the closest prior art does not teach nor reasonably suggest calculating an average value of said differences between said reference pixel and said defect pixel, and setting defective color information of said defect pixel to the value of the corresponding color information of said reference pixel minus said average value as required by claim 7.

Claims 8-12 are allowed as being dependent upon and allowed claim 7.

Consider claim 13, the closest prior art of record (JP 06-153087) teaches:

An image taking apparatus (Image pickup equipment, figure 4) including a pixel compensating circuit (see figure 4) for compensating defect pixels included in a video signal (see paragraphs 0006-0008) comprising:

a color information holding unit (frame memory, 45) for holding plural kinds of color information of a defect pixel and pixels adjacent said defect pixel (See paragraphs 0015 and 0016. Frame memory (45) holds three frames of pixel data (R, G and B) including defecting and non-defective pixels.), said color information of said defect pixel including defective color information and non-defective color information (See paragraphs 0019 and 0020. The frame memory holds defective color information (Px) and corresponding non-defective pixel information (Qx) for specific pixel locations, with Px and Qx corresponding to different color spaces.);

a difference calculating unit for calculating differences between non-defective color information (Qx) of said defect pixel and corresponding color information of said pixels (Q1-Q8) adjacent said defect pixel (See paragraphs 0019 and 0020. Absolute values of differences between non-defective pixel (Qx) and surrounding pixels (Q1-Q8) are calculated.);

a reference pixel determining unit for determining a reference pixel (Y) having color information that is the most similar to said non-defective color information (The pixel having the lowest absolute value difference from the non-defective pixel is calculated and written into a Y address buffer.).

The closest prior art then teaches replacing the defect pixel (Px) with the value of an adjacent pixel of the same color space (P) according to the pixel location (Y) determined as the reference pixel location above (paragraph 0021).

However, the prior art of record does not teach nor reasonably suggest a compensating unit for calculating an average value of said differences between said

reference pixel and said defect pixel, and setting defective color information of said defect pixel to the value of the corresponding color information of said reference pixel minus said average value as required by claim 13.

Claims 14-18 are allowed as being dependent upon and allowed claim 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
